^{1/} Estimated to contain 18% butterfat.

^{2/} 75% of net milk equivalent assumed to be separated for cream.

^{3/} Includes estimate of baby foods made from whole milk.

3. Feed Costs. Price ceilings on feed grains, concentrates and by-products will continue as now set during the 1945-46 fiscal year. It is assumed that there will be no increase in the price support levels for corn, barley and grain sorghums. It is also assumed that the average value of feed grains and concentrates fed to dairy herds in all regions in 1945-46 will be the same as the relatively high average value in the 1944 calendar year, except that the average value in the South Atlantic States is adjusted downward to account for the 1944 drought.

4. Alternative Livestock Enterprises. Price ceilings on beef cattle, hogs and eggs will remain substantially at present levels during the 1945-46 fiscal year, and farm prices of beef cattle, calves, hogs and eggs will be above the 1944-45 average and will be at or near ceiling levels during most of 1945-46. It is assumed that there will be no increase in the price support level for hogs in 1945-46.

5. Milk Utilization. There will be no important change from the present in the position of relative importance among dairy products as far as military and other war uses are concerned. It is also assumed that any change in the relative ceiling price structure for dairy products will not effect a shift in the utilization of whole milk among the various dairy products. A possible exception to this assumption is the expected increase in dry ice cream mix production where, however, the increase has been restricted by careful selection of producers and wartime restrictions.

It is assumed that conservation order WFO 79 will be administered in such a manner as to permit a further relaxation on sales of fluid milk and cream, particularly during the summer months, during 1945 and 1946. It is also assumed that sales of skim milk by-products will continue to be exempt under this order.

It is assumed that ice cream order WFO 8 will be administered in 1945 and 1946 in such a way as to prevent any significant increase in the use of butterfat in ice cream for civilians above the quantity so used in 1944.

It is assumed that there will be a moderate relaxation of restrictions on the production of WFO 92 cheeses during the months of heavy milk production in 1946, but that such relaxation will not be as great as occurred in the corresponding period of 1945.

REVISED ESTIMATES OF PRODUCTION OF DAIRY PRODUCTS CALENDAR YEAR 1945 and FISCAL YEAR 1945-46

Since the time of drafting the main body of this report, including the assumptions, events have made the cessation of hostilities appear imminent. Accordingly, we have re-examined both the assumptions and other recent information including the data made available in the August 1 Crop Report to ascertain whether the production estimates for the final quarter of 1945, for which period firm allocations are to be established, appear reasonable. While some changes in the assumptions appear advisable, especially those relating to (a) the status of dairy production and sales restrictions orders, and (b) the length of time for which the assumptions can reasonably be extended, there does not appear to be sufficient change in the fundamental conditions of production or of over-all demand to effect a significant revision in the 1945 estimates. All production estimates applicable to 1946, however, should be considered tentative and subject to reconsideration within the next two or three months.

ASSUMPTIONS

As a basis for the estimates for the third and fourth quarters of 1945 and the preliminary estimates for the first six months of 1946, it has been assumed that:

1. Returns to Dairy Producers. Net returns to producers (excluding dairy production payments) for milk and for butterfat in cream will average the same in each month of the 1945-46 fiscal year as in the corresponding month of the 1944-45 fiscal year. This is based on the assumption that price ceilings on dairy products will remain substantially unchanged at present levels and that prices of all dairy products will remain at ceiling levels in 1945-46. It assumes that the combined demand for dairy products for military, lend-lease, U. S. civilians and foreign relief will continue sufficiently great to support prices at such ceilings.

Dairy production payment rates, April to June, inclusive, 1946, will be the same as those announced for the corresponding months of 1945.

The fluid milk purchase and resale programs and the cheese and butter subsidy programs will be continued substantially as now in effect.

2. Feed and Pastures. The production of corn, oats, barley, grain sorghums, other feeds and hay will be the same as that indicated in the July 1 Crop Production report issued by the BAE July 10, 1945.

Dairy pasture conditions will be at about the long-time average during the late fall (October-November) of 1945 and the spring and early summer months (April-June) of 1946. Winter weather conditions are assumed to be about average.
